Complex fares

Deadline

The deadline for operators to provide their complex fares is 31st March 2025.

- Primarily this covers post-pay products (e.g. tickets in capping schemes) and through tickets.
- BODS fares validator being updated to check certain conditions where caps are being defined
- No ETM supplier is currently able to produce data for capped products
- CFDS can produce data for capped products

CFDS

New multi-operator features

A new feature has been added to CFDS to support collaboration between operators for adding access rights to products for multi-operator ticketing schemes

- Collaborative approach to multi-operator data agreed with major operators at OpDI
- Each multi-operator product is created by a 'lead operator' in agreement with other participating operators
- Other operators involved in the products are only expected to contribute information on their services and stops covered by the product
- Notifications are available both as email and internal to the service at each step of the data creation process
- Previous multi-operator feature (where a single operator creates the whole product) is still available
